

Kyle Robinette

Fort Collins, CO | kyl robinette23@gmail.com | (970)-769-6429 | www.linkedin.com/in/kyle-robinette

Professional Summary

Graduate student in the Professional Science Master's program in Ecosystem Science and Sustainability at Colorado State University, with a background in computer science, data analysis, and environmental fieldwork. Actively seeking an internship to gain applied experience in watershed science, water quality, and ecological restoration. Brings strong problem-solving skills, GIS and data analysis capabilities, and hands-on experience in outdoor education and river-based work. Motivated to support monitoring, restoration, and data-driven decision-making while learning from practitioners and contributing meaningfully to community-centered water management efforts.

Technical & Field Skills:

- **GIS & Spatial Analysis:** Basic mapping, spatial data management, and visualization
- **Data Analysis & Management:** Data cleaning, quality control, exploratory analysis; Python/R, Excel
- **Environmental & Field Skills:** Field data collection, basic water quality sampling concepts, ecological monitoring support
- **Hydrologic & Watershed Knowledge:** Hydrology fundamentals, watershed processes, water law & Western water policy concepts
- **Technical Communication:** Clear documentation, data visualization, and communication with technical and non-technical audiences
- **Outdoor Operations & Safety:** River-based work, outdoor leadership, situational awareness, and safety-focused decision-making

Natural Resource Experience

Water Database Specialist | ROSSyndicate - CSU

Fort Collins, CO | March 2026

- Develop and maintain a geospatial water supply databases for a National Park Service climate adaptation project, integrating data from federal, state, and internal sources
- Apply quality assurance and quality control workflows to improve data accuracy, consistency, and usability
- Automate data querying and visualization tasks using R scripting to improve efficiency and reproducibility
- Collaborate with National Park Service staff to streamline database access and support practical use by end users

Mild to Wild Rafting | River Guide

Durango, CO | Summer 2025

- Interpreted river hydrology, watershed processes, and water management concepts for diverse audiences along the Animas River.
- Developed strong observational skills related to flow conditions, weather patterns, and watershed dynamics in real-time field environments.
- Maintained detailed trip logs and safety documentation, reinforcing attention to detail and structured reporting.

IT and Energy Experience

Clear Perceptions | IT Technician

Fort Collins, CO | 12/2022 - 7/2024

- Managed structured data and documentation systems across multiple client environments, ensuring data accuracy, consistency, and accessibility.
- Evaluated, compiled, and organized technical information from multiple sources to support troubleshooting and long-term system integrity.
- Developed and maintained clear documentation and standardized workflows to improve efficiency and reproducibility.

Skyline Solar | Solar Installer

Fort Collins, CO | 01/2022 - 12/2022

- Installed and maintained solar energy systems, requiring technical precision, troubleshooting, and safe handling of specialized equipment.
- Interpreted technical schematics and electrical layouts, ensuring proper system functionality and compliance with safety standards.
- Conducted on-site assessments in diverse outdoor conditions, applying field-based problem-solving.

Coursework

Environmental Data Science Applications - Describe the basic code, file, and data management skills required to efficiently and effectively analyze environmental datasets of a range of sizes

Water Law & Policy - Examine fundamentals of water allocation, distribution, and rights

Land Use and Water Quality - Physical, chemical, biological water quality parameters affecting land use; land management to maintain water quality; water quality standards, legislation.

Water Sustainability in the West - Explored the historical, social, agricultural, and environmental issues related to water resources and the sustainability of its use in the Western United States.

GIS and Data Analysis in Water Resources - Exposure to multiple data analysis and GIS tools used to study water resources.

Watershed Problem Analysis - Integration of spatial watershed issues, focused on problem solving in watershed science.

Education

Colorado State University – Fort Collins, CO

Professional Science Master's (PSM), Ecosystem Science and Sustainability (December 2026)

Colorado State University – Fort Collins, CO

Bachelor of Science, Computer Science, 3.6 GPA, Minor: Mathematics (May 2021)
